Today's requirements for the pharmaceutical and vitamin manufacturing, distribution and application of ingredients to be applied to the skin are constantly changing.

In the United States, the FDA and Drug Administration, state and federal agencies, and the pharmaceutical industry have been demonstrating a new approach to certain products.

Goals

- Integration to existing Financial Application
- Generate export documents
- GMP compliance
- Growth without major IT change

Solutions

- BatchMaster ERP

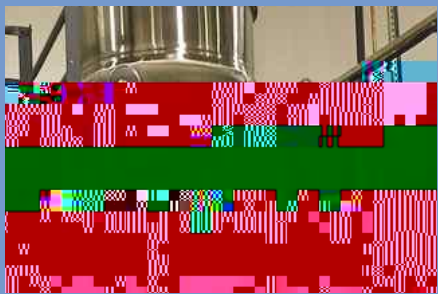

Results

- Real-time inventory control
- Improved profitability
- Instant costing of new products
- Improved Customer service

The ingredients your internal production can easily make excellent quality ingredients in skin care products."

Linda W CEO

The time spent manually creating everything from MSDS to INCI Lists and drawings taking up too much time and reducing profit margins

Pete Vicek
VP of Production

Colvance realized that their original system could not meet the growing demands in their market.

The critical consideration since we were centered on functionality

BatchMaster ERP contained all the specific features we needed for our Manufacturing and Distribution applications.

Colvance chose BatchMaster ERP as the existing package was not meeting their capacity for Manufacturing. BatchMaster ERP allowed us to better manage our customer and inventory, both US and international.

We needed a system that would help us automatically export documents to our website and reduce the time spent creating things from MSDS to INCI Lists. It took too much time and reduced our margins.

Colvance chose BatchMaster ERP because we needed a company without the distractions of a large firm. Functionality was our top priority. We needed a solution that would allow us to open up financial and quality control. Our customers and production are critical to our success. BatchMaster ERP's sales and service are excellent.

The first step was identifying our business model and vendor requirements, with the goal of fully supporting our manufacturer's business model.

After close consideration, we decided that BatchMaster ERP was the best solution for our international sales.

Additionally, we knew that BatchMaster ERP was available, and its technology would be a great asset for our business.

Why BatchMaster ERP for Manufacturing?

Adhering to regulatory compliance, managing production and decision support are the success factors for manufacturers. BatchMaster ERP's comprehensive departments will plan, track and report while self-regulating the environment and our success.

BatchMaster's understanding of the manufacturing process and tight control over the manufacturing process has developed a solution that has allowed us to plan and react to unforeseen issues.

By providing a centralized and thorough organization, BatchMaster ERP helps you quality control shelf at the right time, and at the right price.

Sales & Compliance

The Dynamics of the Manufacturing Industry Formula
security and consistency are crucial.
